Skill Sheet 17-C Buoyancy 1. Buoyant force Physical scientists use the word fluid to describe any matter that can flow. The matter could be a liquid, like water, or a gas, like air. When an object is placed in a fluid (liquid or gas), the fluid exerts an upward force upon the object. This force is called a buoyant force.

Name: Date: 5.1 5.1 Mass, Weight, and Gravity How do we define mass, weight, and gravity? How are mass, weight, and gravity related? The weight equation  $W = mg$  shows that an object's weight (in newtons) is equal to its mass (in kilograms) multiplied by the strength of gravity (in newtons per kilogram) where the object is located.
