Ethanol precipitation is a commonly used technique for concentrating and de-salting nucleic acids (DNA or RNA) preparations in aqueous solution. The basic procedure is that salt and ethanol are added to the aqueous solution, which forces the precipitation of nucleic acids out of solution. After precipitation the nucleic acids can then be separated from the...

When purifying a protein, it's important to keep your protein happy. If you are going to use the protein in binding and activity assays, such as the surface plasmon resonance (SPR) technique, then your protein needs to be soluble and active. For success in these experiments, it is crucial that you create a buffer that...

Forkhead box protein P2 (FOXP2) is a protein that, in humans, is encoded by the FOXP2 gene, also known as CAGH44, SPCH1 or TNRC10, and is required for proper development of speech and language. FOXP2 is a transcription factor, meaning that it encodes for a regulatory protein. The gene is shared with many vertebrates, where it generally plays a role in communication (for instance, the ...

Genetic testing, also known as DNA testing, allows the determination of bloodlines and the genetic diagnosis of vulnerabilities to inherited diseases. In agriculture, a form of genetic testing known as progeny testing can be used to evaluate the quality of breeding stock. In population ecology, genetic testing can be used to track genetic strengths and vulnerabilities of species populations.
