Solution Of Linear System Theory

In mathematics, a system of linear equations (or linear system) is a collection of two or more linear equations involving the same set of variables. For example, $+ - = - + = - - + - =$ is a system of three equations in the three variables x, y, z . A solution to a linear system is an assignment of values to the variables such that all the equations are simultaneously satisfied.

System of linear equations - Wikipedia

A linear system is a mathematical model of a system based on the use of a linear operator. Linear systems typically exhibit features and properties that are much simpler than the nonlinear case. As a mathematical abstraction or idealization, linear systems find important applications in automatic control theory, signal processing, and telecommunications. ...

Linear system - Wikipedia

A linear system of equations is a set of n linear equations in k variables (sometimes called "unknowns"). Linear systems can be represented in matrix form as the matrix equation $Ax=b$, (1) where A is the matrix of coefficients, x is the column vector of variables, and b is the column vector of solutions. If $k < n$, then the system is (in general) overdetermined and there is no solution.
