This is now a problem satisfying Laplace's equation with Dirichlet boundary conditions. In section 1.9 of Jackson, it is shown that the solution for this problem is unique. The constant value of the potential on the outer surface of the cavity satisfies Laplace's equation and is therefore the solution.

In this article, we did a deep dive in the most common Jackson problems - exceptions and errors, looking at the potential causes and at the solutions for each one. The implementation of all these examples and code snippets can be found on Github - this is a Maven-based project, so it should be easy to import and run as it is.

solving a Jackson problem is: a. Days 1-2: Arguing about what exactly the problem is asking, what assumptions to make, why the problem can't be done as stated, why Mathematica cannot handle the integral, why Jackson probably didn't do any of these problems, why the initial 10 pages of algebra failed to deliver the correct answer. b.
