In mathematics, a system of equations is considered overdetermined if there are more equations than unknowns. [citation needed] An overdetermined system is almost always inconsistent (it has no solution) when constructed with random coefficients. However, an overdetermined system will have solutions in some cases, for example if some equation occurs several times in the system, or if some ...

In linear algebra, the singular-value decomposition (SVD) is a factorization of a real or complex matrix. It is the generalization of the eigendecomposition of a positive semidefinite normal matrix (for example, a symmetric matrix with positive eigenvalues) to any  $\times$  matrix via an extension of the polar decomposition. It has many useful applications in signal processing and statistics.
