DYNAMICS In this unit we will deal with the causes of motion. What makes objects move is our primary concern. Moreover, we give Newton's law of motion and try to explain causes of motion with these laws. Let's begin with concepts one by one that will help us in analyzing motion.

The Physician Wellness Resources Compassionate. Caring. Confidential. Research indicates that many physicians are reluctant to engage in face-to-face counseling with traditional EAP consultants — yet they're often in desperate need of a compassionate listener who understands the enormity of the work, life and family challenges they face.

To determine the velocity and acceleration functions, examine the orientation of the velocity and acceleration vectors or the slopes of the respective position and velocity graphs at each of the four critical locations.

One of the toughest hurdles to overcome in a small to medium sized listening environment is where to put the speakers. So often, we'd love big speaker sound, but don't have the room, and sometimes that rules out a subwoofer or two as well. Emily Duff's "Needledrop Blues" kicks off the ...

Shown below are two in-phase, coherent sound sources. This fact that each source emits the same wavelength can be verified by noting that the distance from a crest/compression to its next crest/compression is the same for both sources.

Clear filters, also known as window glass filters or optical flats, are transparent and (ideally) perform no filtering of incoming light. The only use of a clear filter is to protect the front of a lens. UV filters are used to block invisible ultraviolet light, to which most photographic sensors and film are at least slightly sensitive. The UV is typically recorded as if it were blue light, so ...

The barometer question is an example of an incorrectly designed examination question demonstrating functional fixedness that causes a moral dilemma for the examiner. In its classic form, popularized by American test designer professor Alexander Calandra (1911–2006), the question asked the student to "show how it is possible to determine the height of a tall building with the aid of a barometer."

Work Power Energy Exam2 and Problem Solutions 1. Applied force vs. position graph of an object is given below. Find the kinetic energy gained by the object at distance 12m. By using work and energy theorem we say that; area under the graph gives us work done by the force. $\Delta E_k = W = \text{area under the graph} = (8+4)/2 \cdot 8 = 8(12-8)$ $\Delta E_k = 12 \cdot 4 = 16$ joule 2.

The OLABS is based on the idea that lab experiments can be taught using the Internet, more efficiently and less expensively. The labs can also be made available to students with no access to physical labs or where equipment is not available owing to being scarce or costly.

Waves come in many shapes and forms. While all waves share some basic characteristic properties and behaviors, some waves can be distinguished from others based on some observable (and some non-observable) characteristics. It is common to categorize waves based on these distinguishing ...

In recent years, many studies have been devoted to investigate the application of biochar for pollutants removal from aqueous solutions. Biochar exhibits a great potential to efficiently tackle water contaminants considering the wide availability of feedstock, low-cost and favorable physical/chemical surface characteristics.
