Fourier's law of heat transfer: rate of heat transfer proportional to negative temperature gradient, Rate of heat transfer $\partial u = -K_0 (1) \text{ area } \partial x$ where K_0 is the thermal conductivity, units $[K_0] = \text{MLT}^{-3}\text{U}^{-1}$. In other words, heat is transferred from areas of high temp to low temp.

Three-dimensional problem. Solutions of the heat equation are characterized by a gradual smoothing of the initial temperature distribution by the flow of heat from warmer to colder areas of an object. Generally, many different states and starting conditions will tend toward the same stable equilibrium.
