In physics, relativistic quantum mechanics (RQM) is any Poincaré covariant formulation of quantum mechanics (QM). This theory is applicable to massive particles propagating at all velocities up to those comparable to the speed of light  $c$ , and can accommodate massless particles. The theory has application in high energy physics, particle physics and accelerator physics, as well as atomic ...

The late J.J. Sakurai, noted theorist in particle physics, was born in Tokyo, Japan in 1933. He received his B.A. from Harvard University in 1955 and his PhD from Cornell University in 1958. He was appointed as an assistant professor at the University of Chicago, where he worked until he became a professor at the University of California, Los Angeles in 1970.

Quantum mechanics (QM; also known as quantum physics, quantum theory, the wave mechanical model, or matrix mechanics), including quantum field theory, is a fundamental theory in physics which describes nature at the smallest scales of energy levels of atoms and subatomic particles.. Classical physics, the physics existing before quantum mechanics, describes nature at ordinary (macroscopic) scale.

The word adjoint has a number of related meanings. In linear algebra, it refers to the conjugate transpose and is most commonly denoted  $A^H$ . The analogous concept applied to an operator instead of a matrix, sometimes also known as the Hermitian conjugate (Griffiths 1987, p. 22), is most commonly denoted using dagger notation  $A^\dagger$  (Arfken 1985).

C'est incontestablement la résolution du problème du rayonnement du corps noir qui a marqué le début de la mécanique quantique. Au début du XX<sup>e</sup> siècle, Max Planck résout en effet ce problème en faisant l'hypothèse que l'énergie des atomes ne peut s'échanger que par multiples de quantités proportionnelles à la fréquence du rayonnement, selon la formule désormais célèbre :
