Tweet. Pin It. I mentioned in my first blog entry that writers like Carl Zimmer have inspired me to start my own blog.

Science Ink - When science and tattoos collide

Tattoo needles don't work the way you think they do. The ink is held between separate itty bitty needles -- the same way ink is held between strands of hair on a paintbrush -- and when those needles puncture the skin, the ink is sucked down into your skin. Physics! If you're having trouble visualizing how that works,...

All the science that goes into a single tattoo - The ...

The Secret to a Tattoo's Permanence: The Immune System. Tattoo needles punch through the epidermis, the outer layer of skin, and drive the ink into the dermis, the deeper layer that's mottled with nerves and blood vessels. "Every time the needle penetrates, it causes a wound that alerts the body to begin the inflammatory process," the video explains.

Tattoos Don't Work the Way You Think They Do - The Atlantic

Science Ink: A Taxonomy of Tattoos Inspired by Science. Those responses, which often arrived in Zimmer's inbox in the form of images, have now been compiled into a book published earlier this month, . In it, the science obsessed--or at least those enthusiastic enough to etch their favorite equations, diagrams, schematics,...

Science Ink: A Taxonomy of Tattoos Inspired by Science ...

In fact, scientists are still investigating that question. To make a tattoo permanent, a tattoo artist punctures the skin with hundreds of needle pricks. Each prick delivers a deposit of ink into the dermis, the layer of skin that lies below the epidermis, which is populated with blood vessels and nerves.
