The history of hydraulic systems can be traced back to the 1646, when Braise Pascal performed the first hydrostatic experiment. He used a Pascal's barrel to investigate the effect of a force applied at one point of the fluid and how it is transmitted to the other sections within an enclosed system. The outcome of his experiments resulted in a scientific law/principle called Pascal Law or ...

A helicopter main rotor or rotor system is the combination of several rotary wings (rotor blades) and a control system that generates the aerodynamic lift force that supports the weight of the helicopter, and the thrust that counteracts aerodynamic drag in forward flight. Each main rotor is mounted on a vertical mast over the top of the helicopter, as opposed to a helicopter tail rotor,

3. Blowout Preventer System. If hydrocarbons unexpectedly flow into the well during drilling or other operations despite the use of primary barriers in the well, the blowout preventer (BOP) system serves as a secondary means of well control (i.e., preventing undesired hydrocarbon flow from the well).
