An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

A fiber Bragg grating (FBG) is a type of distributed Bragg reflector constructed in a short segment of optical fiber that reflects particular wavelengths of light and transmits all others. This is achieved by creating a periodic variation in the refractive index of the fiber core, which generates a wavelength-specific dielectric mirror. A fiber Bragg grating can therefore be used as an inline ...

The leading causes of irreversible blindness and visual impairment are retinal degenerative diseases including glaucoma, diabetic retinopathy, retinitis pigmentosa, and AMD, which affect millions of people worldwide. Although the biological basis of these diseases is not fully understood, the degeneration of the retina is caused by the progressive and eventual death of retinal cells .
