Petrology: The Study of Igneous, Sedimentary and ...

Igneous, Sedimentary, and Metamorphic Rocks. When dealing with rocks we can classify them into three different categories: igneous, sedimentary, and metamorphic. I kind of want to go into a definition of each one of those. Give a couple examples. Igneous rock is formed when a hot magma cools beneath the ground or lava cools above the ground.

Igneous, Sedimentary, and Metamorphic Rocks [Video]

Petrology The Study of Igneous, Sedimentary and Metamorphic Rocks

Metamorphic rocks are formed by subjecting any rock type—sedimentary rock, igneous rock or another older metamorphic rock—to different temperature and pressure conditions than those in which the original rock was formed. This process is called metamorphism, meaning to "change in form".The result is a profound change in physical properties and chemistry of the stone.

Rock (geology) - Wikipedia

Learn about Sedimentary, Igneous, and Metamorphic rocks. The kit includes real specimens from each rock type so you can examine them first hand. Rocks included are: Sedimentary Rocks (Sandstone, Conglomerate, Limestone), Igneous Rocks (Basalt, Granite, Pumice), Metamorphic Rocks (Marble, Schist, Quartzite). *Warning!
