Physics (from the Ancient Greek φύσις physis meaning "nature") is the fundamental branch of science. The primary objects of study are matter and energy. Physics is, in one sense, the oldest and most basic academic pursuit; its discoveries find applications throughout the natural sciences, since matter and energy are the basic constituents of the natural world.

ram seshadri group: functional inorganic materials. our research at the interface of physics, chemistry, and materials science, is focused on the crystal chemistry, and crystal-structure — property relations in functional inorganic materials. The functions of interest to us include phosphors, magnetics, thermoelectrics, ferroics, photovoltaics, and redox-activity (for battery applications).

Compared to other materials, aluminum production is an energy-intensive industry (Abdulkadir et al., 2015) that shows the greatest difference in energy between primary and secondary production (about 174–186 MJ/kg for primary production, compared to 10–20 MJ/kg for secondary production) (Green, 2007). The reason for the much less energy consumed by the secondary Al production is that its ...
