You might see where this is getting at. Your application connects with ARITHABORT OFF, but when you run the query in SSMS, ARITHABORT is ON and thus you will not reuse the cache entry that the application uses, but SQL Server will compile the procedure anew, sniffing your current parameter values, and you may get a different plan than from the application.

We've heard about all kinds of techniques for getting fudgy brownies, from simply using less flour to baking them for a short amount of time at a very high heat then plunking the pan into a bowl of ice water. But when we considered the crock pot's low-and-slow heat, which can turn even the toughest cuts of meat into meltingly tender bites, it seemed worth trying.
