**Screen Resolution Chart**

The eye's perception of display resolution can be affected by a number of factors – see image resolution and optical resolution. One factor is the display screen's rectangular shape, which is expressed as the ratio of the physical picture width to the physical picture height. This is known as the aspect ratio. A screen's physical aspect ratio ...

**Display resolution - Wikipedia**

Regardless of what your screen resolution is, you can watch any video on it, no matter the video's resolution (higher or lower). However, if the video you want to watch has a higher resolution than that of your display, your device converts the video's resolution to one that fits the resolution of your display. ...

Screen Resolution Statistics. As of January 2017, about 95% of our visitors have a screen resolution of 1024x768 pixels or higher:

**Browser Display Statistics - W3Schools**

Up to 3', you are below the blue line. This means you can see the pixels of an Ultra HD resolution. If you go back a bit (up in the chart), between 3' and 7', an Ultra HD resolution does not matter anymore because you cannot see the extra pixels anyway. However, you are still too close for a 1080p resolution (it will not appear perfect).

Screen resolution or native resolution is the number of pixels on the display listed in the number across the screen by the number down the screen. Laptop displays look best when the graphics are run at this native resolution. While it is possible to run at a lower resolution, doing so creates an extrapolated display.
