Using Snell's Law to Predict An Angle Value. As with any equation in physics, the Snell's Law equation is valued for its predictive ability. If any three of the four variables in the equation are known, the fourth variable can be predicted if appropriate problem-solving skills are employed. This is illustrated in the two examples below.

KEY 3 14.) What is the index of refraction of a substance whose critical angle is 42.0° ? Answer - $n_2 = n_1 \sin 42.0^\circ / \sin 90^\circ = 1.0003 \sin 90^\circ = 1.4949 \approx 1.50$ 15.) The speed of light in a clear liquid is three quarters the speed of light in air.

KEY Snell's Law - Mr. Wilkison's Science Website

Answer: D. Bouncing off a boundary (choice b) is reflection. Refraction involves passing through a boundary (choice a) and changing speed (choice c); however, a light ray can exhibit both of these behaviors without undergoing refraction (for instance, if it approaches the boundary along the normal).

To find the index of refraction, we use Snell's Law: We have values for , , and , so now we just need

to rearrange the equation to solve for n_2 . Now, we can just plug in our numbers. Therefore, the index of refraction of the second material is 1.346. To find the angle of refraction, use the Snell's ...

Snell's Law - AP Physics 2 - Varsity Tutors

Snell's law: Snell's law, in optics, a relationship between the path taken by a ray of light in crossing the boundary or surface of separation between two contacting substances and the refractive index of each. This law was discovered in 1621 by the Dutch astronomer and mathematician Willebrord Snell (also

Answer: See answers below. This question tests your understanding of the variables which effect the resistance of a wire. The resistance of a wire expressed by the equation $R = \rho \cdot L / A$ (where ρ is the resistivity of the material, L is length of wire, and A is cross-sectional area of the wire).
