INTRODUCTION: Thin layer chromatography (TLC) is a chromatography technique used to separate mixtures.Chromatography was discovered by M. Tswett in 1906.Thin layer chromatography is performed on a sheet of glass, plastic, or aluminum foil, which is coated with a thin layer of adsorbent material, usually silica gel, aluminum oxide, or cellulose (blotter paper).

The Boltzmann distribution appears in statistical mechanics when considering isolated (or nearly-isolated) systems of fixed composition that are in thermal equilibrium (equilibrium with respect to energy exchange). The most general case is the probability distribution for the canonical ensemble, but also some special cases (derivable from the canonical ensemble) also show the Boltzmann ...

Calibration curves are commonly used for quantitative analysis in analytical chemistry to calculate the concentrations of chemicals in samples. Typically, the concentration of the analyte, the chemical being quantified, is the independent variable and is plotted on the x-axis. The detector response, the reading from the instrument, is the dependent variable and is plotted on the y-axis.

According to the industrial use, the food additives are classified into 25 classes, which include about 230 different compounds. Some compounds present more than one principal action, due to their different functionalities, which are dependent on the added quantities and processing mode of the food.
