The supermarket studied and the methodology of the analysis and modelling is detailed in this section. As Fig. 1 indicates, this assessment is based on the actual consumption data, dry-bulb temperature and relative humidity records for 2012. This data was divided into two data sets to be used in a multiple linear regression analysis to generate two equations, one for electricity and one for gas.

2.3.. Scaling-up principlesTwo systems are geometrically similar when the ratio of the linear dimensions of the small and the scaled-up system are constant (Leuenberger, 1983).It is obvious from Table 1 that the fluid beds are not geometrically similar to each other. The volume of the expansion chamber and the area of the air-distributor plate do not increase proportionally with the batch size ...
