Here the function that remembers its lexical scope is bar, its lexical scope is the scope defined inside foo. Executing the function foo and assign its result to baz makes baz a reference to the bar function inside foo. Closure is all around you in JavaScript, you just have to recognize and embrace it. Closures are very common indeed,

You Don't Know JS: Scope & Closures [Book]
You resolve LHS and RHS references by looking on your current floor, and if you don't find it, taking the elevator to the next floor, looking there, then the next, and so on. Once you get to the top floor (the global scope), you either find what you're looking for, or you don't. But you have to stop regardless.
