Chapter 11: File System Implementation

The kernel is a computer program that is the core of a computer's operating system, with complete control over everything in the system. On most systems, it is one of the first programs loaded on start-up (after the bootloader).It handles the rest of start-up as well as input/output requests from software, translating them into data-processing instructions for the central processing unit.

Necessary conditions. A deadlock situation on a resource can arise if and only if all of the following conditions hold simultaneously in a system: Mutual exclusion: At least one resource must be held in a non-shareable mode. Otherwise, the processes would not be prevented from using the resource when necessary.
